

COASTAL SOURCE

CAS Component Audio System

Coastal Source has taken outdoor audio to the next level. **CAS** brings component quality audio outside where it belongs, delivering higher performance than traditional, rack-mounted amplification systems.

Like all Coastal Source systems, **CAS** incorporates our patented Plug+Play cabling system that ensures superior performance, reliability and speed of installation. Poor quality connections, out of phase polarities and shorted connections are a thing of the past.

CAS features and benefits:

- Easy to install waterproof enclosure system that can be direct burial or wall mounted close to the speakers, minimizing the power and frequently response losses that have been accepted in outdoor systems due to a lack of alternative solutions—until now.
- Component-based flexibility allows the designer to create the perfect system for all outdoor spaces and budgets.
- Proven JL Audio® high-performance, marine-grade amplification.
- Safe low-voltage power supplies and cabling.
- Capable of powering 5.1 surround speaker configurations in an outdoor environment with dealer-supplied 5.1 processor.
- CAS amplifiers can power up to (16) 8 ohm satellite speakers and (4) 8 ohm subwoofers.
- Direct Drive speaker connection allowing up to 300' runs for each cable eliminating the inefficiencies and losses of 70V systems. Adaptable to 70V when more than 300' per channel is required.
- DSP for Bi- and Tri-Amplification offering dedicated amplifiers for each frequency band resulting in superior performance versus full range amplification systems. Easy access to crossover frequency settings and slopes. Individual gain control for each frequency band allowing fine tuning and matching of speakers to their environment.
- 3rd party music streamers offering known interfaces and performance, including the only Sonos® outdoor audio solution. Full compatibility with other 3rd party streamers.
- Proprietary line-level input cables and connections allowing for connection to remote sources and multi-room audio systems.

All Coastal Source products, including the **CAS** series of amplifiers and streamers, are designed to **Defy the Elements!**[™]

CAS amplifiers

CAS500/2

Two channel amplification system delivering 250 watts each to the satellite speakers. Not compatible with subwoofers.

CAS700/3

Three channel amplification system delivering 300 watts to the subwoofer(s) and two channels at 200 watts each to the satellite speakers.

CAS500/3

Three channel amplification system delivering 250 watts to the subwoofer(s) and two channels at 125 watts each to the satellite speakers.

CAS1000/3

Three channel amplification system delivering 600 watts to the subwoofer(s) and two channels at 200 watts each to the satellite speakers.

CAS600/1

Single channel amplification system delivering 600 watts to up to (4) subwoofer(s).

CAS streamers

CAS Stream | Bluetooth

Bluetooth 4.0 wireless streamer.

CAS Stream | AirPlay®

AirPlay wireless streamer with Apple Airport Express.

CAS Stream | Sonos

Sonos wireless streamer with Sonos Connect.
